## Green technology OUR FUTURE

Green technology is a sustainable energy source. Very important for our future

Green technology is an important step for climate change

*Please let us integrate green technology into our lives*

### IMPORTANCE OF GREEN TECHNOLOGY

Green or eco-technology includes sustainable or environmental technology and it covers continuously evolving groups of methods, practices, and materials, from techniques for generating energy to non-toxic cleaning products.

It considers the long and short-term impact of something on the environment. Green technology is environmentally friendly by definition since it encompasses energy efficiency, health and safety concerns, recycling, renewable resources, and many other things.

---

We are eager to introduce and prove once again that the importance of green technology is immense if we want to preserve our environment and build a sustainable future.

## PURPOSE OF OUR PROJECT

Climate change is one of the important problems that concern and threaten the world today. The increasing greenhouse effect in the atmosphere has revealed today's global warming and global climate change problem. Technological solutions are being developed around the world aimed at reducing and eliminating everything that causes global warming and therefore climate change. One of them is green technology. We aim to improve behaviors such as protecting the environment, which is the aim of green technology, repairing damage to the environment in the past, protecting natural resources and protecting the Earth's natural resources. Therefore, environmental education should be given importance in order to create environmental awareness. In this study, it is aimed to increase the perception and knowledge levels and raise awareness with the presentations and discussions prepared by our students after giving information about the importance of green technology in the regulation of the world climate. It talks about the advantages that green technologies offer to society and our future, albeit on a small scale, is aimed to have an idea of how to prevent global warming. With the technologies used in the green sector; It will be shown that solutions can be brought on issues such as recoverable and alternative energy production, energy conservation/storage, water conservation/recovery, waste management, reduction of toxic waste, emission control, product and system design/redesign, recovery and conservation of metals, trees, papers, chemicals and plastics.

# logos and posters

Our students who took part in our project prepared logos and posters about green technology

A graphic with a green background. In the center is a dark green silhouette of a world map. To the right of the map is a large, stylized green leaf. Surrounding the map and leaf are several circular icons: a lightbulb, a sun, a lightning bolt, a wind turbine, and a plug with a lightning bolt. The text "Green Technology" is written in a bold, green, sans-serif font at the bottom left of the graphic.

## Green Technology

## ***CYBER SECURITY***

Cyber security; It is the application to protect computers, networks, software applications, critical systems and data from possible digital threats. Cybersecurity for students has been an issue that will attract more attention every year. Therefore, it is necessary to develop strategies to explain the basics of cyber security to our students. We made our students watch a short video about cyber security and did word cloud studies on cyber security with Wordart, one of the Web2 tools. We added padlete with the videos we took while watching. In this way, we better understood the importance of security in our work

# It's time to poem

Green technology life is life  
Reduce your footprint and go green.  
Everything is green and clean.  
Every time and every time  
Not covered by smoke  
There is no garbage  
Energy safe and energy safe  
Conserve energy to save on green.  
Help nature and help nature  
Nature more important than anything  
Oxygen is part of nature  
Looking for the future  
Ocean protect us  
Green light must conserve  
Youths safe in nature  
Ecosystem is not harmed anymore  
The water is not polluted  
Walk and more walk  
In the nature  
Not reflective of the past  
Noisy life dirty life  
If your city is green, it will be clean!  
Nature clean life clean  
Go green or go home.
